

A NOTE ABOUT SOME ADDITIONAL SOFTWARE

We have supplied some additional software to allow the contents of some relevant files to be viewed as follows. However, other suitable apps can be used if preferred.

Irfanview: This useful program allows **image files** in **.bmp, .jpg** etc.format to be viewed and edited. Please run the **iview442_setup.exe** program to install it.

Powerpoint viewer: This program can be used to view **.ppt** files. Please run the program **PowerPointViewer.exe** to install it.

OpenShell; This program will change the **Windows interface** to a more **classic version** with a **Start button** etc. To install it, please run the **OpenShellSetup** program.

The installation files for the final 2 programs are large and should be downloaded directly from the relevant program web sites as follows:

Libre Office: This free program can be used to view and edit documents in MS Word (**.doc** or **.docx**) formats. To download it please click on the following internet link:
<https://www.libreoffice.org/download/>

Foxit Reader: This program is used to view files in **.pdf** format. It can be downloaded from the following link: <https://www.foxit.com/pdf-reader/>
